

# Simulated Key Loader (SimKL) Desktop

**WebSec's SimKL™ Desktop is a Windows-based simulator that mimics the functionality of the Simple Key Loader (SKL) User Application Software (UAS)**

- Simulates Key loading and Key receiving
- Simulates filling TrKEKs
- Simulates loading to all ECUs supported by SKL, including IFF Mode 5 & GPS/SAASM ECUs
- Uses unclassified test vectors
- Customizable for specific use cases
- Can be utilized by helpdesk personnel, and as a training & troubleshooting tool

## INNOVATE & DEVELOP

WebSec has created a unique niche by providing leading defense contractors with customized security software and hardware solutions for embedded, handheld, web-based, tactical, and stand-alone computer systems. We continue to bring secure technology solutions to the next generation of software and hardware devices.

We have been extensively involved in the development of Tier 2, Tier 2 ½, and Tier 3 devices, including SKL, RaSKL, TKL, DMD-PS, CUAS, and other associated COMSEC equipment and platforms.

Our background in the COMSEC development arena gives us the ability to offer comprehensive tools and solutions to meet the demands of modern key management and distribution.

License Quantity	Cost	Quantity Discount
1 - 4	\$3,995.00	0
5 - 9	\$3,400.00	15%
10 - 24	\$2,800.00	30%
25 - 49	\$2,200.00	45%
50 - 99	\$1,995.00	50%
100 - 249	\$1,400.00	65%
250 - 499	\$ 800.00	80%
